INTRODUCTION

This publication presents Chile's External Debt as of December 31st., 1979, including both public and private indebtedness.

The Central Bank's computerized information system produces data on public and publicly guaranteed external debt, which is the main focus of this report. The information system's application to private sector debt (without public guarantee) has been developed recently. This has improved the information available on private debt registered under foreign exchange law Article 14. For this reason, for the first time these Credits are presented separately in Table Nº 3.

GENERAL CONSIDERATIONS

Chile's External Debt as of December 31st., 1979 increased US\$ 1,551.5 million with respect to the same date in 1978. This represents a nominal increase of 22.4%.

Adjusting for exchange rate effects, the composition of new indebtedness is as follows (1):

(1) Exchange rate effects increase external debt by US\$ 19 million in 1979.

SPECIFICATION	VARIATION	
	(US\$ million)	%
I. Traditional External Debt	+ 385,5	+ 25,1
1. Central Government Debt	- 230,4	- 15,0
2. Autonomous Public Sector	+ 593,7	+ 38,7
3. Private Sector with Public Guarantee	+ 22,2	+ 1,4
II. Other External Liabilities	+ 1.147,0	+ 74,9
1. International Monetary Fund	- 172,0	- 11,2
2. Supplier's credits, Private Sector	+ 35,0	+ 2,3
3. Credit Lines that finance Capital Goods Imports, Commercial Banks, Development Banks and Banco del Estado	+ 148,0	+ 9,7
4. Financial Credits to the Private Sector (Exchange Law Art. 14, 15 16)	+ 983,0	+ 64,1
5. Short Term Lines of Credit to Commercial Banks, Banco del Estado and Central Bank	+ 153,0	+ 10,0
Total Variation	1.532,5	100,0

New indebtedness in the autonomous Public Sector included a US\$ 314.2 million increase in the Central Bank external debt, a US\$ 187.8 million increase in the debt of the CORFO Affiliates and an increase of US\$ 173.2 million in Public Service external debt.

**Utilization of External Credits During 1979
by Sector**

SECTOR	(US\$ million)	%
I. Public Sector	1.272,0	41,6
1. Central Government Debt	108,0	3,5
2. Autonomous Public Sector *	1.164,0	38,1
II. Private Sector	1.784,0	58,4
1. With Public Guarantee	51,0	1,7
2. Without Public Guarantee	1.733,0	56,7
T O T A L	3.056,0	100,0

* Public Sector Debt serviced without use of Central Government resources.

In the Private Sector, new debt was mainly financial credits registered under Art. 14 of the International Exchange Law.

External financial resources came primarily from foreign private banks and financial institutions, which together contributed approximately 87.2% of the total external credit.

**Utilization of External Credits 1979
by Origin**

ORIGIN	(US\$ million)	%
Multinational Organizations	44,3	1,4
Governmental Organizations	105,3	3,5
Private Banks and Financial Institutions	2.665,4	87,2
Suppliers	199,2	6,5
Private Bond Issue	41,8	1,4
T O T A L	3.056,0	100,0

The terms of credits obtained in 1979, improved markedly with respect to 1978. This is shown in the payment profile of the external debt. (Diagrams Nº 4, 4A, 4B).

The net flow of credit utilized in 1979 (US\$ 858.7 million) not only financed the balance of payments current account deficit, but produced an overall balance of payments surplus of US\$ 1,048 million. At the same time, the gross international reserves of the Monetary System increased by 74.7% growing from US\$ 1,597 million as of December 1978, to US\$ 2,792 million as of December 1979.

External Credits Net Flow

Utilizations	US\$ 3.056,0 million
Less:	
1. Amortization	US\$ 1.523,5 million
2. Interest	US\$ 673,8 million
Net Inflow	US\$ 858,7 million

REAL EXTERNAL DEBT

In order to know the "net external debt position of the country", it is necessary to consider the Gross Reserves of the Monetary System, which should be deducted from the General External Debt.

Also, to compare the External Debt at different periods of time, it is convenient to express its value in dollars of equal purchasing power. For this purpose, debt figures expressed in current dollars have been deflated by the US Wholesale Price Index since the US has steadily been Chile's major creditor. The result is the series "Real General External Debt 1960-1979" (Table Nº 1 Column IV).

This data shows that "real" debt decreases by 7.2% between 1978 and 1979.

The total series shows the following variations:

PERIOD	Real Variation of the General External Debt	% Variation Cummulative Annually
Dec. 1960 - Dec. 1979 (19 years)	+ 243,5	+ 6,7
Dec. 1960 - Dec. 1970 (10 years)	+ 256,9	+ 9,8
Dec. 1970 - Dec. 1973 (3 years)	+ 9,1	+ 3,0
Dec. 1973 - Dec. 1979 (6 years)	- 11,7	- 2,1

DEBT SERVICE FOR 1979

The General External Debt Service in 1979 amounted to US\$ 2,197.3 million, of which US\$ 1,523.5 million correspond to amortization and US\$ 673.8 million to interest. If the interest received for deposits or loans effected abroad are deducted from the US\$ 673.8 paid in interest, debt service represents 42.3% of total exports of the country during the year, percentage which is lower than that of 1978, which was 46.4%.

It is worth mentioning that in 1979, US\$ 377.0 million of debt was pre-paid. Had this not been the case, the debt service ratio would have only represented 35% of exports (Table N° 4).

The improvement of this ratio with respect to that of 1978 was due to a 60% rate of growth in exports compared to a debt service growth of only 49%. Traditional External Debt Service was US\$ 1,296.6 million in 1979, of which US\$ 937.5 million were amortization, and US\$ 359.1 million interest. Pre-payments by the Public Sector amounted to US\$ 305.3 million, not including pre-payments of IMF debt, which amounted to US\$ 33.1 million (Table N° 11).

The "Debt Service" ratio referred to Traditional External Debt was 24.1% when pre-payments were considered. This frame is lower than that of 1978 (Table 4A). If pre-payments are not included, the ratio is 17.9%.

It is important to mention that it is this ratio, referred to Public and Publicly Guaranteed Debt Service, which is most widely used for comparison among countries. During the period through 1975-1977, this ratio has been

unusually high. The deferring of External Debt Service and the regularization of debts due to nationalization during years 1971-1975 increased the ulterior obligations of the Public Sector.

The structure of 1979 debt service was as follows:

SPECIFICATION	Payments of Amortization and Interest Year 1979	Percentage %
I. Traditional External Debt	1.296,6	59,0
1. Central Government Debt	413,2	18,8
2. Autonomous Public Sector	849,3	38,6
3. Private Sector with Public Guarantee	34,1	1,6
II. Other External Liabilities	900,7	41,0
1. International Monetary Fund	195,7	8,9
2. Supplier Credits	74,0	3,4
3. Credit Lines for Capital Goods Imports, Commercial Banks, Development Banks and Banco del Estado	8,0	0,4
4. Financial Credits	567,0	25,8
5. Short Term Credit Lines	56,0	2,5
T O T A L	2.197,3	100,0

PAYMENTS SCHEDULE FOR 1980-1989

1) Traditional External Debt

The ten years payments forecast for the Traditional External Debt is based mainly on information provided by a periodically checked computational file. The amortization profile of the Traditional External Debt, based on the Gross Balance as of December 31st., 1979, maintains for the 1980-1989 decade a similar structure to that of 1978. 85.3% of the Gross Balance will be amortized in that decade, and 55.7% in the next five years. This last

percentage is lower than the one observed in 1978; this is due mainly to the lengthening of terms and to the pre-payment of relatively short term credits.

The more favorable terms of the Central Government Debt are shown in the following percentages:

SPECIFICATION	Total Amortization (as % of Gross Balance, December 1979)	
	Next 5 year	Next 10 years
1. Central Government Debt	45,8	65,8
2. Autonomous Public Sector	59,7	93,2
3. Private Sector with Public Guarantee	62,5	93,8
TOTAL TRADITIONAL EXTERNAL DEBT	55,7	85,3

Likewise, when viewed from the sources side, it can be seen that Suppliers, Nationalization and Renegotiation Debt plus Public Issue Bonds, will practically disappear in the next five years. Indebtedness with Governmental and Multinational Institutions, as well as Private Bond Issue will still be outstanding. The 58.9% of the outstanding indebtedness as of December 31st., 1979 with Private Banks and Financial Institutions will be amortized during the next 5 years, confirming the improved conditions available for Chile in international markets during the last two years.

SPECIFICATION	Total Amortization (as % of Gross Balance, December 1979)	
	Next 5 year	Next 10 years
Multinational Organizations	26,5	56,5
Governmental Organizations	37,5	65,6
Private Banks and Financial Institutions	58,9	96,2
Suppliers	82,7	99,4
Nationalizations	88,8	100,0
Renegotiations	99,3	100,0
Public Bond Issue	100,0	—
Private Bond Issue	—	40,2
TOTAL TRADITIONAL EXTERNAL DEBT	55,7	85,3

2) General External Debt

A profile of projected service on General External Debt for the next 6 years is developed on Table N° 3A.

Approximately 45% of the next 6 year's service corresponds to "Other External Liabilities". It may be deemed that this responsibility falls on the Private Sector, as IMF is not significant in this total. 74% of the General External Debt Balance as of December 31st., 1979 will be amortized during the next five years, not considering possible pre-payments.

It is worth mentioning that 39.8% of Traditional External Debt Balance will be paid in the next 3 years as well as 50% of "Other External Liabilities", confirming the improved conditions for the Public and Publicly Guaranteed Private Debt as was mentioned before.

Practically all credits disbursed in 1979, whose payments were set at 66 months, and which were registered under the International Exchange Law Art 14, will be paid in a single installment in 1985, increasing amortizations of that year notoriously.

Due to the characteristics of short term lines of credit to the banking system, interest payments have been estimated only for 1980, on the basis of historical data of previous years.

TRADITIONAL EXTERNAL DEBT DISBURSEMENT PROGRAM

The available utilization amount as of December 31st., 1979, amounts to US\$ 723.8 million, which do not include US\$ 33.9 million corresponding to IDB credit N° 471 - OC, whose unutilized balance has been cancelled by the debtor (Table N° 12-13).

According to the disbursement forecast, during 1980, 66% of the total balance as of December 1979 will be used. It is the Public Sector with its own resources the one which absorbs the main percentage of utilization during 1980 (70.7%), prevailing Central Bank and CORFO Affiliates.

The undisbursed balances come principally from Private Banks, Financial Institutions and in a lesser degree from Multinational Official Organizations; US\$ 328 million and US\$ 202 million respectively.

STATISTICAL ANNEX

DEFINITIONS

Transactions

- Contracted amount:
External credits contracted during 1979.
- Utilized amount:
Utilizations produced during 1979, including: a) Credits contracted in 1979, and b) Credits contracted in prior years with unutilized balances outstanding.
- Amortization:
Payments of amortization of credits which are in the process of being repaid.
- Interest:
Interest paid both for credits that are in repayment period and in a period of grace. In addition they include, though in a lesser proportion, commissions and similar payments.
- Cancellation of Unutilized balance:
Partial or total cancellations of unutilized balances outstanding.

Debt Outstanding

- Net balance:
Utilized and outstanding amount, as of December 31st., 1979.
- Unutilized balance:
Available utilization amount as of December 31st., 1979, both of credits contracted during 1979 and of credits contracted in prior years.
- Gross balance:
Sum of net balance and unutilized balance. It is a potential debt since it includes amounts which do not yet constitute an effective debt.

External Debt Service

Corresponds to the joint payments of amortizations and projected interest based on the Gross Balance as of December 31st., 1979. Interest include commissions and other similar payments. These projections implicitly include a tentative programme of utilization of each one of the credits which constitute the Unutilized Balance as of December 1979.

1977	5.434	871	4.563	4.309	348,9	— 1,6
1978	6.911	1.597	5.314	4.571	370,1	+ 6,1
1979	8.463	2.792	5.671	4.242	343,5	— 7,2

Column I: **General External Debt:** Equal to the sum of the net balance outstanding at the end of each year of the following: Traditional External Debt (Public and Publicly Guaranteed Private Debt), IMF credits; Suppliers Credits to Private Sector; Financial Credits to Private Sector, Exchange Law (Art. 14, 15 and 16), and short term lines of credit to the banking system (commercial banks, Banco del Estado and Central Bank of Chile).

Column II: **Gross Reserves of the Banking System:** Defined as gross assets of the banking system (commercial banks, Banco del Estado and Central Bank of Chile) at the end of each year. In this series, gold in internat'l reserves has been valued at the average buying price in the London Market. Moreover, transactions under reciprocal credit agreements are valued on a net basis.

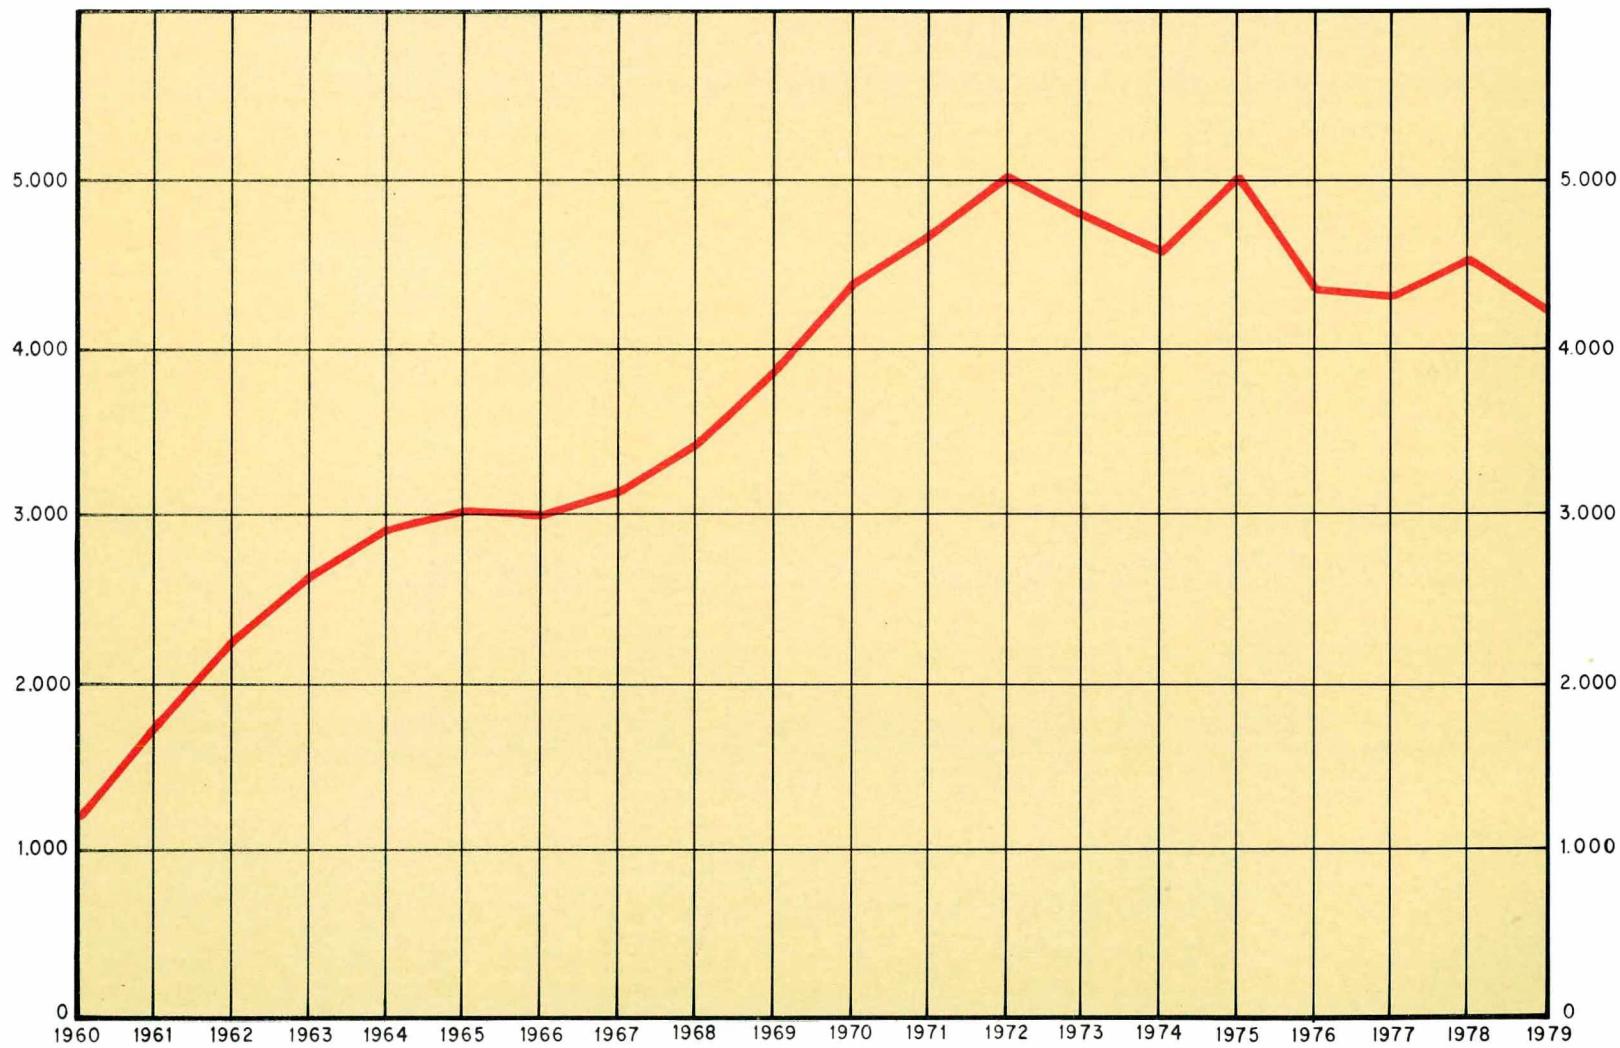

Column III: **General External Debt Less Gross Reserves (I - II):** Represents the net debtor position of Chile with foreign countries.

Column IV: **Real General External Debt:** Represents col. III deflated by the US wholesale price index (Dec. 1976 = 100). This series permits comparison of the net balance outstanding in real terms.

Column V: **Real General External Debt Index:** Represents column IV as an Index with 1960 = 100.

Column VI: **Annual Variation of Real General External Debt:** Refers to the annual variation of index in column V.
