## INTRODUCTION

This publication presents Chile's external debt as of December 31, 1981 including both public and private indebtedness.

The concept of "external debt" used is similar to that used by official international organizations, in order to facilitate international comparison.

Thus, in the first place, a clear distinction is made between what is termed to be "public debt" and "private debt".

Public debt is understood to mean the amounts which are disbursed and outstanding, corresponding to each one of the external credits contracted by the Public Sector and by the Private Sector when the latter are covered by a public guaranty. The Public Sector is constituted by state institutions and by enterprises in which the State has a participation which is superior to $50 \%$ of their capitals. "Public guaranty" is deemed to mean the guaranty granted by the State, by state enterprises or by public enterprises in general.

Pursuant to the above interpretation, the concept of "private debt" relates exclusively to the debt contracted by said sector, when such debt is not covered by any type of public guaranty.

In the second place, only the external debt contracted in foreign currency and that therefore must be reimbursed in such currency, is considered. Therefore, the debt, the reimbursement of which may be effected in local currency, i.e., in Chilean pesos, and which consequently does not originate an outflow of foreign currency, is excluded from the definition of "external debt".

In the third place, the debt with the International Monetary Fund is also excluded, according to the international measuring pattern to quantify the external indebtedness recommended by the official international organization. However, it is necessary to point out that this debt is considered for determining the International Reserves of the Banco Central de Chile.

Finally, the external debt only includes medium and long term credit operations, that is, those at over one year.

As of December 31, 1981, the amounts reached by the main categories of external debt which are excluded from the presentation of the external debt, were the following:

External debt repayable in local currency
108.6

External debt with the International Monetary Fund 48.6
Short-term credits of commercial and development banks $1,942.9$
Total 2,100.1

## SITUATION AS OF DECEMBER 31, 1981

Chile's medium and long term External Debt as of December 31, 1981, amounted to 12,552.9 million dollars, which was higher by $3,139.7$ million dollars than that of 1980 . This nominal increase of $33.4 \%$ is the result of a decrease of $6.5 \%$ in the public debt and of an increase of $73.4 \%$ in the private debt. It is important to note that in 1980 the private debt represented $49.9 \%$ of total debt, and that in 1981 its incidence reached to approximately $64.8 \%$.

## Distribution of the medium and long term external debt (Percentages)

| SPECIFICATION | 1960 | 1965 | 1970 | 1974 | 1978 | 1979 | 1980 | 1981 |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| Public Debt | 64.3 | 66.0 | 80.2 | 89.0 | 73.5 | 63.6 | 50.1 | 35.2 |
| Private Debt | 35.7 | 34.0 | 19.8 | 11.0 | 26.5 | 36.4 | 49.9 | 64.8 |
|  | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 |

The greater indebtedness of the private sector was produced preferentially due to the inflow of credits pursuant to Article 14 of the International Exchange Law, which accounted for $86.7 \%$ of the nominal variation of the external debt for that sector.

It is necessary to point out that the external debt of Chile is structured in different currencies; but for measuring purposes it is presented in US dollars, at the exchange rate as of December 31, 1981. Changes in the exchange rate of different currencies with respect to the U.S. dollar due to the revaluation of the latter, produced a decrease of the debt outstanding by 174.3 million dollars with respect to December, 1980.

The composition of the nominal increase of $3,139.7$ million including the exchange rate effect, is as follows:

VARIATION

|  | VARIATION |  |
| :--- | :--- | :---: |
| SPECIFICATION | Million US\$ | $\%$ |
| I. External Public Debt | -305.0 | -6.5 |
| 1. Central Government Debt <br> 2. Autonomous public sector <br> 3. Private sector with public guarantee <br> II. External Private Debt <br> 1. Supplier's credits <br> 2. Lines of credit for imports of capital goods <br> to Commercial and Development Banks <br> 3. Financial credits (Art. 14, 15 and 16 of the <br> International Exchange Law, and credits <br> associated with D.L. 600) <br> Final nominal variation | -122.4 | -9.9 |

The net flow of medium and long term external credits in 1981 financed a part of the Balance of Payments current account deficit and brought about an overall balance of payments surplus of 70 million dollars.

Net Flow of External Credits in 1981

Utilizations
Minus:

1. Amortizations
2. Interest

Total
Net Inflow

US\$ 5,106.6 million

US $\$ 1,792.4$ million
US\$ $1,422.5$ million
US\$ 3,214.9 million
US $\$ 1,891.7$ million

## DEBT SERVICE FOR 1981

During 1981, the service of the medium and long term external debt originated payments amounting to $3,214.9$ million dollars. Of this total, $1,792.4$ million dollars corresponded to amortizations and $1,422.5$ million dollars to payments of interest. This service represents $58.4 \%$ of total exports of the country during the same period.

Amortizations for the year 1981 include 685.9 million dollars corresponding to pre-payments effected by free choice. This brought about the increase of the debt service/exports ratio in 12.5 points. Had this not been the case, the debt service ratio would have only represented $45.9 \%$ of total exports.

The deterioration of this ratio with respect to that of 1980 -including pre-payments - was due mainly to the following circumstances: 1) Pre-payments of 1981 exceed by 471.1 million dollars those 1980. 2) Exports of goods and services decreased by 338.2 million dollars in 1981 with respect to the level of 1980 and 3) Floating interest rate: LIBOR and PRIME RATE, increased their level in 1981 representing a larger interest payment of about 120 million dollars.

In the case of the external public debt, the service of same in 1981 represented $30.1 \%$ of the total exports, compared to $23.2 \%$ in 1980 and $27.2 \%$ in 1979. If pre-payment of Public Sector's credits were to be discounted, this ratio would be reduced to $18.5 \%$ in 1981.

It is necessary to point out that the change occurred in these last few years relating to the source of external financing, namely the more significant role played by the international commercial banks in relation to the traditional official organizations (IDB, IBRD, IDA, etc.), has resulted in a large increase of the debt contracted at floating interest rates.

At the end of 1980 this debt amounted to approximately 6,600 million dollars whereas the estimate for 1981 is 9,800 million dollars.

The greater inflow of resources originating in the international commercial banking system was also due to a greater participation of the Chilean private sector in the obtaining of above mentioned resources.

## PAYMENTS SCHEDULE FOR 1982-1991

An estimate of the amortization schedule for the 1982-1991 decade based on the Gross Balance as of December 31, 1981, indicates that $94.8 \%$ of the medium and long term external debt will be paid during that period, and $65.2 \%$ of such debt, during the $1982-1986$ quinquennium.

The distribution of the amortizations profile is of course different, if a distinction is made between public and private debt, as may be observed in the following table:

|  | Total Amortization as \% of Gross <br> Balance as of December 31, 1981 |  |
| :--- | :---: | :---: |
| SPECIFICATION | Period 1982-1986 | Period 1982-1991 |
| I. Public Debt | 53.8 | 86.5 |
| II. Private Debt | 71.9 | 99.7 |
| 1. Suppliers' Credits <br> 2. Lines of Credit for imports of capital goods <br> 3. Financial Credits (Art. 14, 15 and 16 of the <br> International Exchange Law and credits <br> associated with D.L. 600) | 98.9 | 100.0 |
| Total (I + II) | 96.7 | 100.0 |

In the case of floating rate loans, the annual payments of interest for the period 1982-1991 (see tables $\mathrm{N}^{\circ} 3,6,13,15$ and 17) were estimated with an expositive purpose, considering an average floating interest rate bases of $12 \%$ per annum for the year 1983 and an average of $10 \%$ for each of the eight remaining years of the decade. These interest rate bases do not include the corresponding spreads which were included in the estimate.

## EVOLUTION OF EXTERNAL INDEBTEDNESS

There are different ways in which to analyze the evolution of external indebtedness, the election of one of them will depend on what is to be measured.

In order to render comparable the amount of the external debt through time, it is necessary to express it in money of a constant purchasing power, utilizing some exterior price index as a deflator. For such purpose the wholesale price index of the United States of Northamerica has been chosen as a deflator.

The level of the international reserves represents, to a great extent, a cover against possible risks of insolvency. For this reason international reserves are subtracted from the amount of external debt obtaining what might partially be denominated as "net debtor position" with foreign countries; this method has the further merit of explicity taking into account that part of the accumulated debt contracted with the purpose of augmenting reserves. The resulting amount is deflated by the WPI of the United States, and by this procedure a series expressed in dollars of 1976 is obtained (Table No 7, column IV).

The following variations may be pointed out, for the entire series:

|  | \% of Variation of <br> Real External Debt <br> of Chile | \% of Annual <br> Variation |
| :--- | :---: | ---: |
| PERIOD | +412.1 | +8.1 |
| Dec. 1960 - Dec. 1981 (21 years) | +269.7 | +14.0 |
| Dec. 1960 - Dec. 1970 (10 years) | +2.0 | +0.7 |
| Dec. 1970 - Dec. 1973 (3 years) | +35.8 | +3.9 |
| Dec. 1973 - Dec. 1981 (8 years) |  |  |

## STATISTICAL ANNEX

## DEFINITIONS

## Transactions during 1981

## Amount contracted:

External credits contracted during 1981.

- Amount Disbursed:

Disbursements or utilization of external credits during 1981, originating from: a) Credits contracted in 1981 and b) Credits contracted in previous years with outstanding utilization balances.

## - Amortization:

Payments of capital reimbursement of external credits.

- Interest:

Payments representing the usage cost of the external credit. Also included are payments of commissions and other expenses.

- Annulled Disbursements:

Partial or total annulments of unused balances of external credits. These annulments originate from the impossibility of making use of said balances.

## Situation as of December 31, 1981

- Net Balance:

Amount disbursed or utilized and outstanding as of December 31, 1981.

- Undisbursed Balance:

Part of external credits not yet disbursed or utilized as of December 31, 1981, corresponding to credits contracted during 1981 as well as those contracted prior to that date.

- Gross Balance :

Sum of net balance plus undisbursed balance. This is a potential debt since it includes amounts which have not yet been constituted into an effective debt.

- External Debt Service:

Represents the joint payment of amortizations and interest projected on the basis of the Gross Balance as of December 31, 1981. Interest includes the payment of commissions and other similar payments. Implicitly, these projections include a tentative programme of utilization of each one of the external credits which constitute the Undisbursed Balance as of December 31, 1981.
