#### I. GENERAL OUTLOOK

According to preliminary estimates, Gross Domestic Product grew 9.4% during the first quarter of 1989. During this period, all sectors reached the highest levels of production, for the first quarters of the 1980-89 period.

The national unemployment rate was 6.2% during the moving quarter ending in March, 2.2 percentage points below the rate of the same period of 1988. It is worth pointing out the reduction to zero in the number of people employed in emergency programs (PEM and POJH). Real wages maintained their increasing trend and registered a 4% average increase during the first quarter of 1989, compared with the same period of the previous year.

The accumulated rate of inflation for the first quarter was 3.2%. Great variability has been observed for this rate in the course of these three months, mainly attributed to food and clothing items.

Concerning the foreign sector, the balance of payments showed a US\$ 219.1 million surplus. The trade balance registered a US\$ 561.6 million surplus, positively affected by larger copper export returns and negatively affected by the fruit crisis. The current account deficit amounted to US\$ 275.3 million which was mainly due to the trade surplus mentioned above and the US\$ 808.1 million payment of financial services.

The limits agreed with the International Monetary Fund were satisfactorily met during the first quarter.

#### II. ACTIVITY AND EMPLOYMENT

According to preliminary estimates, Gross Domestic Product (GDP) increased by 9.4% during the first quarter of the present year, compared to the same period of 1988. All productive sectors showed positive growth rates. Particularly

outstanding were those of Fishing (28.7%), Transport and Communications (14.7%), Commerce (14%), Industry (10.7%) and Construction (9.9%), which exceeded the economy's average rate. According to these estimates, all productive sectors reached maximum productive levels for the first quarters of the 1980-89 period.

The national unemployment rate was 6.2% during the moving quarter ending last March, according to estimates carried out by the National Statistical Bureau (INE). This figure represents a 2.2 percentage point decrease relative to the same quarter of 1988, thus maintaining the decreasing trend that this variable has been exhibiting since 1982. Particularly, it is worth pointing out the reduction to zero in the number of persons employed in the emergency employment programs (PEM and POJH). These programs, implemented in 1975 and 1982, respectively, absorbed close to 14% of the labor force at certain critical periods for unemployment levels (1982-1983). In this way, all occupation can be regarded as productive occupation at present, amounting to 4,296,000 people during the January-March quarter of 1989. The productive sectors that experienced the largest employment increase during the quarter mentioned above were Construction (27,9%), Electricity, Gas and Water (21.6%), Industry (13.3%), Mining (13.1%) and Transport and Communications (9.7%), notwithstanding a positive increase in employment in all sectors.

#### III. INFLATION AND WAGES

The accumulated rate of inflation for the first quarter of 1989 -measured by the variation of the Consumer Price Indexamounted to 3.2%. The Wholesale Price Index (WPI), on the other hand, experienced a 4.7% increase. The differences in the evolution of both indexes are basically explained by the different evolution in the prices of mining and imported products.

It is worth mentioning that the variations of the Consumer Price Index during the first quarter have been extremely fluctuating, even taking into account the seasonality that characterizes this indicator. It is thus the case that the CPI grew 1.1% in January, 0.1% in February, and 1.9% in March. This instability in the Consumer Price Index growth rate is mainly explained by the behavior observed in the prices of food and clothing.

The high levels of activity observed during the first quarter of the year have helped to sustain an increasing trend in real wages, which have grown an average of 4% compared to the first quarter of 1988. All productive sectors -except Mining-registered positive growth in their real wages. Outstanding sectors were Construction (12% real growth in wages), Communal and Social Services (8.4%), Transport and Communications (6.7%) and Manufacturing Industries (5.7%). It is worth mentioning that these results reflect the maintenance of a trend that was already present from the previous year.

#### IV. BALANCE OF PAYMENTS AND INTERNATIONAL RESERVES

1. During the first quarter of 1989, the balance of payments registered a US\$ 219.1 million surplus, exceeding by US\$ 156.9 million the surplus of the same period of the previous year.

This positive balance is mainly explained by a strong capital inflow (US\$ 494.4 million) which more than offset the current account deficit of US\$ 275.3 million. This current account deficit resulted from large payments of financial services during this quarter. Most of these correspond to interest payments to International Creditor Banks, which amounted to US\$ 487.4 million (74.6% of total interest paid during the first quarter on medium and long term external debt services). Due to the last agreement signed with International Creditor Banks (April 1988), which modified the periodicity of interest payments (Retiming), these are now concentrated mainly in the first quarter of the year.

The trade balance showed a US\$ 561.6 million surplus during the first quarter of the present year, 3.6% below that of the same period of 1988. Exports amounted to US\$ 2,007.0 million and imports to US\$ 1,445.4 million, figures that are 26.3% and 33.1% higher, respectively, than those registered for the same period of the previous year.

Copper exports, which increased by 44.7%, made the biggest contribution to the increase in total exports. The former are explained by an increase in the price of copper as well as by larger exported volumes. The increase in the value of non-copper exports during the first quarter was 4.3%. This figure was affected by the "fruit crisis". If fresh fruit exports are excluded, however, a 16.7% growth is obtained for the rest of non-copper exports.

Among non-copper exports, it is worth pointing out to the increases in volume of products such as: fresh and frozen

fish and mollusks (37.6%, especially the case of salmon, with a 69% growth), canned fruit (51.7%), bottled wine (41.1%), wood chips (33.0%), fish oil (271.2%). It is also worth pointing out to methanol exports, that were initiated during the fourth quarter of 1988 and amounted to US\$ 17.6 million during the period in reference, with a corresponding volume of 153.7 M.M.T.

During the first quarter, imports increased by 33.1%. Consumer goods contributed to this increase with a 54% growth, intermediate goods contributed with 27.7% and capital goods did so with 32.6%. The 189% increase in automobiles, considered just occasional, contributed enormously to the growth of the former. Among intermediate products, it is worth mentioning the 46.1% increase in intermediate products and spare parts imports, whereas imports of capital goods increased by 32.6% during this period.

The capital account shows a balance that is US\$ 196.3 million higher than the one registered during the first quarter of the previous year. This larger balance is the result of a greater inflow of short term loans associated to foreign trade, and to larger disbursements related to foreign investment loans. This balance allowed for the US\$ 219.1 million surplus in the balance of payments.

 Net international reserves, that is discounting IMF loans and valuing gold and other currencies at fixed parities, amounted to US\$ 2,213.9 million as of March 31, 1989. This figure exceeded by US\$ 246.2 million that of December 31, 1988.

The limit agreed with the IMF for March 1989, including the Copper Stabilization Fund, considered an increase of US\$ 152.2 million, in net reserves, so was therefore met by far.

#### V. MONEY AND INTEREST RATES

During the first quarter of 1989, currency grew 15.7% in real terms compared to the same quarter of the previous year. During the same period, M1A increased by 18.1% in real terms. Both figures show that these aggregates are now growing at lower rates than those of the second half of the previous year (the fourth quarter of 1988 had registered a 23.2% real growth in currency and a 34.8% in M1A, compared to the same period of 1987).

The real growth experienced by the various monetary aggregates during the last quarters of 1988 is mainly explained by the increase in productive activity, jointly with the fall registered in the cost of holding money. It is worth mentioning, however, that the decrease in the rate of inflation in 1988 was favored by the reductions applied to some tax rates, such as the value added tax -that was reduced from 20% to 16% in June 1988- and the rebate of the special tax applied to fuels.

(1) Quarterly averages

(2) Annual rates. Quarterly averages

During the first quarter of 1989, economic activity maintained its strong rhythm of expansion, as demonstrated by the 9.4% growth in Gross Domestic Product. At the same time, there has been an increase in nominal interest rates. In fact, the nominal interest rate for 30 to 89 days deposits averaged 1.47% during the first quarter of 1989, 0.56 percentage points above the rate observed during the same quarter of 1988. The short-term loan rate (30 to 89 days) amounted to 2.10%, 0.68 percentage points above the rate of inflation (3.2% during the first quarter of 1989, compared to 3.0% during the same period of 1988), but to a larger extent by the increase registered in real interest rates. Real rates for 90 to 365 days operations increased from 4.25% to 5.47% in the case of deposits and from 7.35% to 8.23% in the case of loans, during the quarters mentioned above. This significant increase is associated to greater levels of activity and to a sharp increase in international rates. In fact, the LIBO rate (180 days) has experienced and increase of 2.91 percentage points between the first quarter of 1988 and the same period of 1989, whereas the PRIME rate has increased by 2.36 percentage points during the same period.

#### VI. FOREIGN INVESTMENT

During the first quarter of 1989, foreign investment materialized according to the traditional mechanisms of D.L. 600 amounted to US\$ 41.6 million, slightly exceeding the figure for the same period of the previous year. It is worth mentioning that 42.3% of that total is related to two projects in the mining sector (La Coipa, US\$ 15 million, and Falcon Bridge Minera Collahuasi, US\$ 2.6 million).

External debt conversion through Chapter XIX, related to D.L. 600, amounted to US\$ 200.1 million during the first three months of the year, value that exceeds by US\$ 80 million the figure of the same period of the previous year. Thus, total foreign investment, excluding loans associated to D.L. 600, amounted to US\$ 241.7 million during the quarter, figure that is 54.2% over its equivalent for the same period of the previous year. The final 1989 projection for this same financing item, however, is lower that the actual figure registered in 1988.

#### VII. EXTERNAL DEBT

Total external debt as of March 31, 1989 was US\$ 17,362 million, US\$ 287 million below its December 1988 level.

This fall in the country's external debt is the result of a positive net use of US\$ 269.1 million (US\$ 202 million short term and US\$ 37.1 million medium and long term); external debt conversion for US\$ 403.6 million and an appreciation of the USdollar relative to other currencies for US\$ 172.4 million, that results in a decrease of the external debt stock measured in dollars.

Short term debt as of the end of the first quarter amounted to US\$ 2,434 million, 10.1% higher than the existing stock as of December of the previous year. This growth goes in line with the increase registered in foreign trade (exports and imports 25.3%), that is largely financed with this kind of loan. On the other hand, medium and long term external debt decreased by US\$ 519 million during the quarter. This decrease is mainly explained by the external debt conversion operations carried out and by the appreciation of the USdollar in international markets.

Medium and long term external debt net flows amounted to US\$ 37.1 million during the quarter, of which US\$ 258.2 million correspond to disbursements of external loans and US\$ 221.1 million to external debt amortization payments.

It is worth mentioning that the main sources of capital inflows were loans granted by multilateral organizations (IDB-IBRD), which account for 40% of the total, and by firms and private parties associated to D.L. 600, that account for 24.3% of the overall figure.

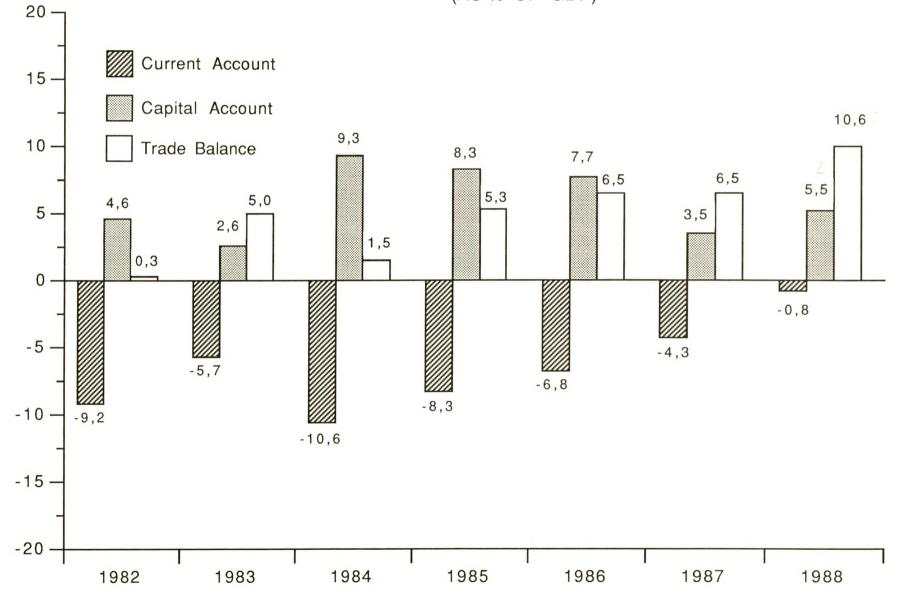

The composition of medium and long term external debt by creditor shows that the decline in the participation of debt owed to Banks and Financial Institutions continues, registering a fall of 1.6 percentage points during the quarter.

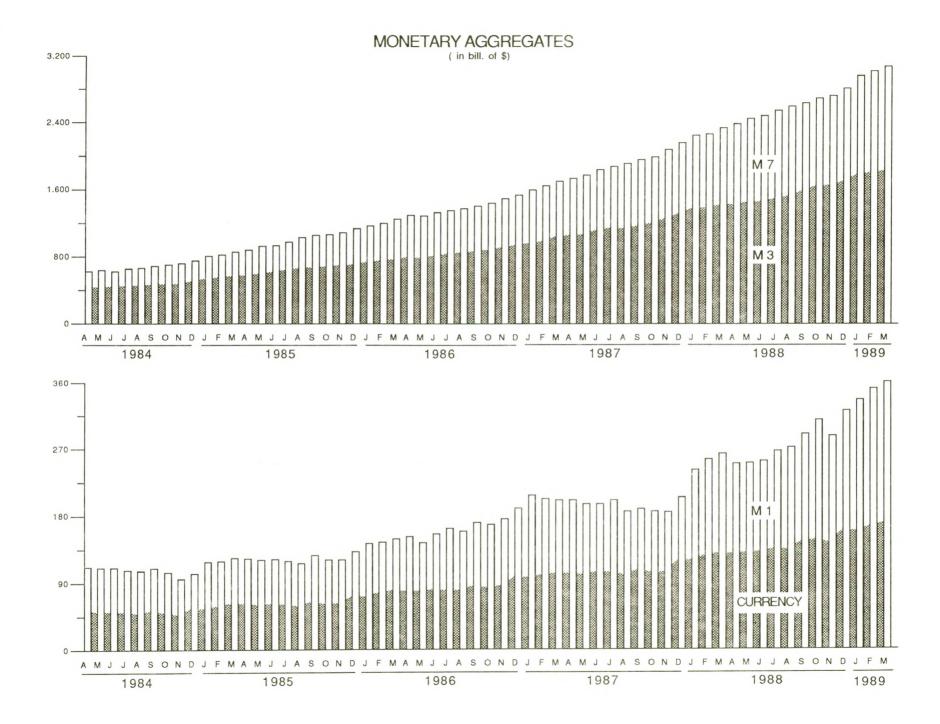

It is worth pointing out that the first quarter's flow of foreign resources originated entirely from "voluntary" loans associated to projects, where the private sector accounted for 61.1% of the quarter's total inflows.

As far as the mechanisms used for debt conversion, new operations continued to materialize during the first quarter of the year, although at much lower rates that the ones observed during the same period of the previous year (US\$ 531.1 million). Total conversion during the first three months of the year amounted to US\$ 406.9 million. In this way, total amount converted from June 1985 until March 31, 1989 reached US\$ 6.627.4 million. A total of 49.2% of debt conversion operations materialized during the first quarter were carried out according to Chapter XIX, whereas 26.2% was materialized according to Chapter XVIII in all its modes.

Retiming of Interest Payments 8/	397.5	
CHANGE IN NET INTERNATIONAL RESERVES 9/	990.4	336.4

1/ Provisional.

2/ Projected as of May 1989, under the following key assumptions:

- Copper price: 112,9 US\$ cents. per lb. (LME)

- Crude petroleum price: US\$ 18.9 per barrel (CIF)

- Effective LIBOR 9.46% (Taking into account 6 month contractual lag)

- Prices of non-oil imports: 6% increase

- Volume growth in copper exports: 13.7%

Volume growth in non-copper exports: 8.4%

3/ Includes investment with external debt notes and capitalization of loans through Chapter XIX and D.L. 600, which were US\$ 903 million in 1988, and which are estimated at US\$ 685.1 million in 1989.

4/ Amortization payments after the 1988-1991 rescheduling of bank and Paris Club debt. Includes US\$ 170.2 of Central Bank pre-payments.

5/ Considers repayment of loans arising from debt to equity swaps through D.L.600, Chapters XIX, and others. Figures omit Chapter XVIII, but include export returns with external debt notes.

6/ Includes loans associated to foreign investment (D.L. 600), and loans to the private sector entered under the provisions of article 15.

7/ Excludes short-term loans to the Central Bank, which are subtracted from reserves.

8/ Counterparts to accrued interest on rescheduled debt included in Financial Services whose actual payment, due to the retiming agreement, has been post-poned.

9/ Definition of Net International Reserves used in IMF program services. Source: Banco Central de Chile.

- Fiscal Deficit Excluding Debt Service / GNP (%)	0.3	0.7	0.7	-0.7	-2.1	-5.0	-7.5

Note: The definition of "fiscal sector" is different from that of the "non-financial public sector" of Table Nº 4, where the actual performance and targets agreed upon with the IMF are shown. The "fiscal sector" includes all the resources controlled by the Treasury, i.e.,those of centralized services plus allocations to decentralized institutions. The term "Deficit" also differs in that the definition presented in this table includes amortizations payments on domestic and foreign public sector debt.

(\*) Provisional figures.
